

Loss-landscape slice at one set of weights: the same directions, two objectives

1-D cuts through the anchor, both directions

anchor: epoch 12 checkpoint
arch: resnet20_bn_cifar
 $\sigma=0.50$ at every one of the 19 sites
($q_l=1$: this arm is R32)

500 test images, fixed across the grid
grid 21 $\times$ 21, span ± 1.0
directions: filter-normalised, seed 0

centre $L_\sigma = 0.801$
centre $L_0 = 1.496$ ($\times 1.87$)

curvature at the anchor
 L_σ : 10 (α), 21 (β)
 L_0 : 8 (α), 13 (β)
filtered is 0.8 $\times$ / 0.6 $\times$ flatter

slice minimum
 L_σ at (0.00,0.00)
 L_0 at (0.00,0.00)
