

Analysis C: target objective on the shared PCA plane of the seed-0 plain and resolution-only checkpoints (epochs 0, 6, 12, 18, 30).

Surface = measured 25x25 grid of reconstructed in-plane points. Checkpoints are drawn only on the floor at their projected coordinates: they lie off the plane (relative residual up to 0.66 at epoch 6) and their own CE is not this surface (see C_checkpoint_ce). $PC1+PC2 = 91\%$ of the variance of 10 points.

train probe (1,000 imgs), target state, recalibrated BatchNorm

- plain: projected checkpoints (floor only)
- resolution-only: projected checkpoints (floor only)

test probe (1,000 imgs), target state, recalibrated BatchNorm
