

Direction-to-direction spread of the symmetric sensitivity (within each training seed)

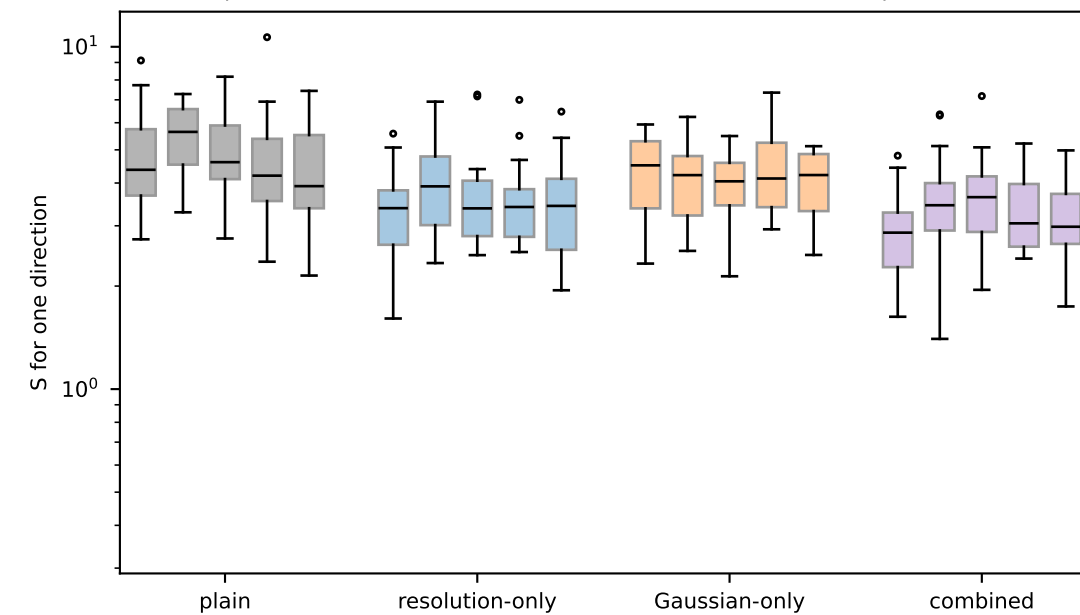

test probe, $\epsilon = 0.1$, saved BN statistics (boxes: 20 directions per seed 0-4)

test probe, $\epsilon = 0.1$, recalibrated BN statistics (boxes: 20 directions per seed 0-4)

test probe, $\epsilon = 0.25$, saved BN statistics (boxes: 20 directions per seed 0-4)

test probe, $\epsilon = 0.25$, recalibrated BN statistics (boxes: 20 directions per seed 0-4)
