

Test accuracy against epoch — one representative run per idea CIFAR-10, ResNet-20 + BatchNorm, 30 epochs, seed-averaged

Dashed lines mark the resolution changes (epochs 6 and 12); the dotted line marks where the blur switches off (epoch 21). Marker = batch. campaign / resbench / adaptive share pinned initial weights and are mutually paired; the ablation batch used a different pinned set (its plain baseline is 0.56 pp lower), so its arms carry a batch offset of roughly that size.
